

GAMER Token White Paper

Powered by the Kaspas Blockchain

Version 1.0 – May 2025

1. Introduction

The blockchain gaming space is growing rapidly, and the demand for seamless, fast, and decentralized infrastructure is higher than ever. **GAMER** is a KRC-20 token built on the **Kaspa blockchain**, designed to power real utility in online games — from in-game purchases and player rewards to content creator incentives and server subscriptions.

Unlike typical meme coins, **GAMER** has a **clear use case**: integrating crypto into multiplayer gaming environments with real-time utility.

2. Vision & Mission

Vision:

To become the leading gaming utility token within the Kaspa ecosystem, empowering players and content creators with a decentralized, fast, and player-first economy.

Mission:

- Provide seamless crypto transactions for in-game economies.
- Incentivize streamers and players through automated token rewards.
- Build and host proprietary game servers, including a future-first presence on **GTA 6 RP**.
- Leverage Kaspa's speed and scalability to create unmatched user experiences.

3. Why Kaspa?

GAMER is built on **Kaspa** because it offers:

- **Lightning-fast transactions** (with ambitions to reach 32-100 BPS).
- **Scalability** for mass adoption without sacrificing decentralization.
- A **fresh and supportive community** of developers and enthusiasts.
- A powerful alternative to congested ecosystems like Solana and BSC.

Kaspa's GHOSTDAG protocol enables GAMER to power real-time in-game economies — something no other blockchain does this efficiently.

4. Utility & Use Cases

Player Rewards

- Players earn GAMER tokens by participating in game servers.
- Tokens can be **traded, held, or used in-game** for items and upgrades.

Streamer Incentives

- Automated token distribution to Twitch streamers playing on GAMER servers.
- Encourages content creation and community growth.

In-Game Transactions

- Use GAMER for subscriptions, cosmetic items, upgrades, and more.

GTA RP Integration

- GAMER is powering GTA RP servers, with plans to be **among the first** on GTA 6.
- Aiming to be a foundational currency in a **future play-to-earn GTA ecosystem**.

5. Tokenomics

Total Supply:

10,000,000 GAMER tokens

Ownership & Distribution:

100% of the token supply is held by the project on behalf of the gamer community. Tokens will be distributed gradually over an 8-year period, with an average of approximately 100,000 GAMER tokens released per month to players, streamers, and contributors.

This model ensures long-term sustainability, fair distribution, and alignment with the project's core mission — rewarding real gamers for their time and contribution.

Allocation Breakdown

Allocation	Percentage	Purpose
Game Rewards	75%	Distributed to players, streamers, and in-game activities
Development Fund	25%	Used for server hosting, development, marketing, partnerships, and liquidity

Note: All tokens are pre-minted and remain in the project's custody, to be distributed transparently and gradually. No private sales, no VC allocations, and no hidden team wallets.

6. Roadmap

Q1 2025

- Token deployment on Kaspia (KRC-20)
- Launch of GTA RP server
- Twitch streamer reward system live

Q4 2025

- Expand to multiple games (e.g., RedM)
- Partnerships with gaming creators
- In-game store using GAMER token

Future (2026+)

- Be first-mover on GTA 6 RP
- Introduce other game developers to GAMER

7. Competitive Advantage

- **First-Mover Advantage:** Among the **first gaming tokens on Kaspas**.
- **Real Utility:** Active servers, real players, and genuine use cases.
- **Community-Driven:** Transparent team, open community, no pump-and-dump.

8. The Team

While pseudonymous, the GAMER project is run by passionate gamers, developers, and Kaspas supporters. With hands-on experience in hosting game servers, automating smart reward systems, and building engaged communities, the team is focused on long-term growth and utility — not hype.

9. How to Get Involved

- **Play on our servers** to earn GAMER.
- **Stream on Twitch** to get rewarded.
- **Join the community** on Discord and Twitter.
- **Hold GAMER** as the gaming crypto for the Kaspas future.

10. Conclusion

GAMER isn't just a token — it's the beginning of a **new decentralized gaming economy**. As more games adopt blockchain features, and with GTA 6 on the horizon, we're positioned to grow alongside the industry with a head start on the **fastest and most scalable chain available**.

Let's build the **GAMER economy** together.

11. Initial Allocation for Community Growth

*To kickstart adoption and reward early engagement, an initial allocation of **60,000 GAMER tokens** has been made:*

- **10,000 tokens** have been distributed to players and testers to trial in-game rewards, ensuring systems are robust and user-friendly.
- **50,000 tokens** will be airdropped to **100 random public Kspa wallets** via a transparent Twitter campaign. This helps to seed the GAMER economy, reward early supporters, and introduce the token to the wider Kspa community.

These actions are designed to fuel early growth while maintaining transparency and aligning with the project's community-first principles.

GAMER Token – Game on, GAMER. Powering Gaming on Kspa.
